

## **The Original Metal Studded Rubber Flooring**

### **Installation Instructions:**

- ◆ Floor must be clean and smooth. Remove any old floor covering and be sure the sub-floor is free of all residue.
- ◆ Install quality white shield felt or saturated paper with multi-purpose adhesive. (This is used to allow for easier tile removal should that be required).
- ◆ Allow to dry thoroughly.
- ◆ Use a two part epoxy with a 1/8" x 1/8" square notched trowel. Spread adhesive and install tiles with smooth side up. Roll with heavy floor tile roller.
- ◆ For ease of cutting tile along walls, remove studs closest to cutting line. Pull studs out from back as one would remove a thumb tack.
- ◆ Punched-out material or waste material from holes is available upon request to plug holes where desired.

### **Maintenance:**

- ◆ Sweep and Wash floor with a mild detergent and water solution. Floor must be dried with a soft cloth. Never leave floor wet. The floor can be waxed if desired but the shine achieved by buffing is better and longer lasting.

### **Product Specification:**

- ◆ Each tile is 12" x 12" x 1/8" solid rubber.
- ◆ Tiles contain 144 studs; one every square inch.
- ◆ Studs are inserted through the back of the tile so that the face is smooth surface combination of metal studs and tile.
- ◆ ASTM F 1344 specification for rubber floor tile. Class I, Type A. Federal Specification SS-T 312-B, Type III (Note: Specifications are based on manufacturer's test results.) For complete data please visit the following URL address:
